Case Study

Obstetrics and Gynecology

Case History

The patient a 51 year old lady P2L2 reported at Sagar Hospitals with major complaints of acute retention of urine for over two days. She has been complaining persistently of the same problem twice over the last 6 months. She was admitted to the Sagar Hospital under the Intensive Care of the HOD, OBG Department.

Investigations

Investigations revealed that the patient had normal blood reports but USG revealed bulky uterus with multiple fibroids a very large one of approximate size of 5*6*5 cm.

Treatment administered

The patient underwent Vaginal Hysterectomy with OTIS Urethrotomy, under General Anesthesia. The surgery was intense and successful. There were no complications involved.

This was rare difficult case which the Sagar Hospitals dealt with ease because of immense expertise.

The Patient withstood the procedure well, with the specimen showing multiple fibroids of various and different sizes. The Post Operative period was endorsed with antibiotics, analgesics and supportive measures.

The Post operative period was uneventful and the patient ambulated on the first day of surgery and got discharged on the second day under stable condition.
